

# List of Biases

## 1. Confirmation Bias

- **Definition:** The tendency to selectively seek, interpret, and remember information that confirms pre-existing beliefs, while ignoring contradictory evidence.
- **Example:** Believing a colleague is incompetent and noticing every minor error they make while completely overlooking their successes.

## 2. Anchoring Bias

- **Definition:** The tendency to place excessive weight on the first piece of information received when making a decision, even if that anchor is arbitrary.
- **Example:** Negotiating an item down from an initial asking price of \$500 to \$350 and feeling satisfied, even though the item is actually only worth \$200.

## 3. Halo Effect

- **Definition:** The tendency to let an overall impression of a person influence specific evaluations of their individual traits or abilities.
- **Example:** Assuming a physically attractive job candidate is automatically more intelligent and competent during an interview.

## 4. Availability Heuristic

- **Definition:** The tendency to overestimate the likelihood of events that easily come to mind, often because they are recent, vivid, or prominent in the media.
- **Example:** Feeling terrified of flying after watching a documentary on plane crashes, despite statistics showing driving is vastly more dangerous.

## 5. Representativeness Bias

- **Definition:** The tendency to judge the probability of an event or person based on how closely it matches a prototype or stereotype, rather than actual statistical odds.
- **Example:** Assuming a politically active philosophy graduate is more likely to be a "feminist bank teller" than just a "bank teller."

## 6. Sunk Cost Fallacy / Escalation of Commitment

- **Definition:** The tendency to continue investing time, money, or effort into a failing project or relationship simply because of resources already committed.
- **Example:** Remaining in a toxic relationship for ten years solely because you feel you have "already invested too much time to walk away."

## 7. Overconfidence Bias

- **Definition:** The systematic tendency to overestimate one's own knowledge, skill level, accuracy, or chances of success.
- **Example:** A survey finding that 80% of drivers rate themselves as "above average" behind the wheel, which is mathematically impossible.

## 8. Dunning-Kruger Effect

- **Definition:** A cognitive bias where people with low ability at a task overestimate their capability, while high performers tend to underestimate theirs.
- **Example:** A complete beginner in a field expressing absolute certainty on complex topics, while a seasoned expert gives nuanced, cautious answers.

## 9. Optimism Bias

- **Definition:** The tendency to overestimate the likelihood of positive events happening to oneself while underestimating the likelihood of negative ones.
- **Example:** A lifelong smoker believing that while smoking causes cancer generally, their own personal risk of getting sick is extremely low.

## 10. Pessimism Bias

- **Definition:** The tendency to overestimate the likelihood of negative outcomes happening to oneself, often linked to depressive states.
- **Example:** A person convincing themselves that any new project or job application they attempt is guaranteed to end in total failure.

## 11. Loss Aversion

- **Definition:** The psychological phenomenon where the pain of losing something is emotionally felt about twice as strongly as the pleasure of gaining an equivalent amount.
- **Example:** Feeling significantly more distress over losing a \$100 bill than the joy felt when finding a \$100 bill on the street.

## 12. Framing Effect

- **Definition:** The phenomenon where people draw different conclusions from the same information depending on how that information is presented.
- **Example:** Preferring a surgical procedure described as having a "90% survival rate" over one described as having a "10% mortality rate."

## 13. Hindsight Bias

- **Definition:** The tendency to view an event as having been predictable after it has occurred, even if there was no objective basis for predicting it beforehand.
- **Example:** Claiming "I knew that start up was going to fail all along" only after reading about its bankruptcy in the news.

## 14. Status Quo Bias

- **Definition:** Preference for maintaining the current state of affairs, even when making a change would be objectively beneficial.
- **Example:** Keeping a bank account with high fees out of inertia, despite readily available cheaper offers.

## 15. Decision Fatigue

- **Definition:** The deterioration of decision-making quality after long sessions of repeated choices.
- **Example:** Judges granting more favourable verdicts in the morning than in the late afternoon.

## 16. Bandwagon Effect

- **Definition:** The tendency to adopt beliefs, behaviours, or attitudes simply because many other people are doing so.
- **Example:** Buying a specific brand of shoe primarily because it is trending on social media and all your friends are wearing it.

## 17. False Consensus Effect

- **Definition:** The tendency to overestimate how much other people share your beliefs, values, habits, and preferences.
- **Example:** Assuming that almost everyone in your office secretly agrees with your political views just because you hold them strongly.

## 18. IKEA Effect / Effort Justification

- **Definition:** A cognitive bias in which people place a disproportionately high value on products they helped create or assemble.
- **Example:** Valuing a self-assembled \$50 bookcase more than a pre-built \$200 bookcase because of the personal effort put into building it.

## 19. Endowment Effect

- **Definition:** The tendency to value an item more highly simply because you own it compared to if you did not.
- **Example:** Refusing to sell a mug you own for \$15, even though you would never spend more than \$5 to buy the exact same mug yourself.

## 20. Illusion of Control

- **Definition:** The tendency for people to overestimate their ability to control events that are actually governed by chance.
- **Example:** Blowing on a pair of dice before rolling them in Craps, believing it increases the odds of hitting a high number.

## 21. Gambler's Fallacy

- **Definition:** The incorrect belief that if a random event has occurred more frequently than usual in the past, it is less likely to happen in the future (or vice versa).
- **Example:** Believing that after a coin lands on heads five times in a row, the next flip is "due" to land on tails.

## 22. Base Rate Neglect

- **Definition:** The tendency to ignore statistical general information (base rates) in favor of specific, vivid details when judging probability.
- **Example:** Assuming a shy, quiet person is a librarian rather than a salesperson, ignoring the fact that there are vastly more salespeople in the population than librarians.

### 23. Conjunction Fallacy

- **Definition:** The mistaken belief that a specific combination of two conditions is more likely to occur than a single, general condition on its own.
- **Example:** Thinking it is more likely that a person is a bank teller and an active feminist than simply being a bank teller.

### 24. Planning Fallacy

- **Definition:** The tendency to underestimate the time, costs, and risks needed to complete a future task, even when aware of past delays.
- **Example:** Estimating a home kitchen renovation will take 2 weeks when every previous remodeling project you've done took over a month.

### 25. Mere Exposure Effect

- **Definition:** The psychological phenomenon where people tend to develop a preference for things merely because they are familiar with them.
- **Example:** Liking a new pop song on the radio after hearing it ten times, even though you disliked it the first time you heard it.

### 26. Ostrich Effect

- **Definition:** The tendency to avoid dangerous or negative financial and personal information by "burying one's head in the sand."
- **Example:** Refusing to check your bank account statement during a period of heavy spending to avoid feeling anxious about your finances.

### 27. Default Effect

- **Definition:** The strong tendency for people to accept the pre-set option chosen for them rather than actively selecting an alternative.
- **Example:** Sticking with the factory notification settings on a new smartphone because changing them requires manual setup.

### 28. Paradox of Choice

- **Definition:** The phenomenon where having too many options causes anxiety, hesitation, and lower satisfaction with the final decision.
- **Example:** Walking away from a jam display without buying anything because choosing between 30 different flavors feels overwhelming.

### 29. Attention Bias

- **Definition:** The tendency for recurring thoughts or current emotional states to selectively filter what we notice in our environment.
- **Example:** Noticing fast-food advertisements on every block when you are hungry, while completely overlooking them when you are full.

### 30. Denomination Effect

- **Definition:** The tendency to spend more money when it is in smaller denominations (e.g., five \$10 bills) than when it is in a single large denomination (e.g., one \$50 bill).
- **Example:** Hesitating to break a single \$100 bill for a small purchase, but easily spending five individual \$20 bills throughout the day.

### 31. Contrast Effect

- **Definition:** The enhancement or diminution of a perception as a result of immediate exposure to a contrasting object or experience.
- **Example:** Perceiving a \$70 shirt as cheap after browsing a rack of \$400 designer jackets in the same store.

### 32. Primacy Effect

- **Definition:** The tendency to recall and heavily weight the first pieces of information presented over information presented later.
- **Example:** Remembering only the first three items on a long grocery list because they were spoken first.

### 33. Recency Effect

- **Definition:** The tendency to recall and heavily weight the most recent information presented over earlier information.
- **Example:** Rating a job applicant more favorably because their final interview question was answered exceptionally well, forgetting earlier mistakes.

### 34. Peak-End Rule

- **Definition:** A heuristic in which people judge an experience largely based on how they felt at its most intense point (peak) and at its end, rather than the total sum or average of the experience.
- **Example:** Remembering an overall grueling 5-mile hike as fantastic because it ended with a breathtaking view and a free ice cream bar.

### 35. Reconstruction Bias

- **Definition:** The phenomenon where each memory recall modifies the original memory by integrating elements of the current context or environment.
- **Example:** A childhood memory recalled at age 40 subtly shifts to include your current perspectives and knowledge compared to when you recalled it at age 20.

### 36. False Memories

- **Definition:** Memories of events that never actually occurred, often induced by suggestion, imagination, or misleading post-event information.
- **Example:** People convincingly "remembering" being lost in a shopping mall as a young child after being repeatedly asked about the fictional event in a psychological experiment.

### 37. Misattribution Effect

- **Definition:** Confusion regarding the source of a memory, where the core information is recalled correctly but attributed to the wrong context or origin.
- **Example:** Believing a vivid scenario was a personal childhood experience when it was actually a scene from a movie you saw years ago.

### 38. Tip-of-the-Tongue Phenomenon

- **Definition:** The temporary inability to retrieve a specific word or name from memory, accompanied by the strong feeling that retrieval is imminent.
- **Example:** Knowing precisely which actor played a role and describing their appearance, but being unable to articulate their name in the moment.

### 39. Mood-Congruent Memory Bias

- **Definition:** The tendency to selectively recall information and past events that match your current emotional state or mood.
- **Example:** Easily recalling past failures and painful memories during a depressive period while struggling to access happy memories.

### 40. Generation Effect

- **Definition:** Information created or produced by oneself is better remembered than information that is simply read or passively received.
- **Example:** Retaining a concept much better after attempting to solve a problem or explain it yourself before reading the correct answer.

### 41. Serial Position Effect

- **Definition:** The tendency to recall the first (primacy) and last (recency) items in a series better than the items in the middle.
- **Example:** Studying a list of 20 vocabulary words and remembering only the top three and bottom three words during a quiz.

### 42. Picture Superiority Effect

- **Definition:** The phenomenon where concepts and information presented as pictures are more likely to be remembered than when presented as words.
- **Example:** Remembering a brand's visual logo far more clearly than its written slogan years after seeing an advertisement.

### 43. Google Effect (Digital Amnesia)

- **Definition:** The tendency to forget information that can be easily found online using search engines, relying on technology as external memory.
- **Example:** Forgetting a close friend's phone number because it is saved on a smartphone and readily retrievable at any time.

#### 44. Levels of Processing Effect

- **Definition:** The idea that deeper, meaningful analysis of information leads to stronger, longer-lasting memories than shallow, surface-level processing.
- **Example:** Memorizing a word by analyzing its deeper meaning in a sentence rather than just noting whether it is written in capital letters.

#### 45. Von Restorff Effect (Isolation Effect)

- **Definition:** The tendency to remember an item that stands out visually or conceptually from its surroundings better than non-distinctive items.
- **Example:** Spotting a bright red word highlighted in a list of black text and remembering that specific word best.

#### 46. Repressed Memory Effect

- **Definition:** A psychological mechanism where traumatic or distressing memories are unconsciously blocked from conscious awareness.
- **Example:** An adult suddenly recalling details of a childhood traumatic event only after undergoing specialized therapy decades later.

#### 47. Zeigarnik Effect

- **Definition:** The tendency to remember uncompleted or interrupted tasks better than tasks that have been successfully completed.
- **Example:** A waiter remembering precise details of an open food order, but completely forgetting the details as soon as the bill is paid.

#### 48. Age-Related Telescoping Bias

- **Definition:** A temporal distortion in memory where recent events appear more distant in time, or past events feel much more recent than they actually are.
- **Example:** Feeling as though a major life event that occurred ten years ago only happened "a couple of years back."

#### 49. Rosy Retrospection

- **Definition:** The tendency to judge past events or eras more positively than they were evaluated at the time they actually occurred.
- **Example:** Remembering a family camping trip as pure bliss while forgetting the rain, mosquito bites, and cold food that ruined the actual days.

#### 50. Fading Affect Bias

- **Definition:** A phenomenon in which the negative emotional intensity associated with unpleasant memories fades faster than the positive emotion attached to pleasant memories.
- **Example:** Cringing less and even laughing at an embarrassing public presentation from high school, while the joy of winning a sports trophy from that same era remains vivid.

### 51. Fundamental Attribution Error

- **Definition:** The tendency to attribute others' behaviors to their internal personality traits while attributing our own behaviors to situational factors.
- **Example:** Thinking a coworker who ignored you in the hallway is rude and contemptuous, whereas if you did the same, you would excuse it as being distracted.

### 52. Self-Serving Bias

- **Definition:** The habit of attributing personal successes to internal traits or effort, while blaming personal failures on external, uncontrollable factors.
- **Example:** Believing you landed a promotion entirely because of your brilliance, but blaming a failed exam on unfair test questions.

### 53. In-Group Bias

- **Definition:** The tendency to favor, trust, and give the benefit of the doubt to members of one's own group over members of outside groups.
- **Example:** Viewing members of your own political party as thoughtful and reasonable while viewing rival party members as irrational.

### 54. Out-Group Homogeneity Bias

- **Definition:** The perception that members of an outside group are all identical to one another, while seeing wide diversity within your own group.
- **Example:** Claiming "people from that rival department all think alike," while recognizing how unique everyone in your own team is.

### 55. Conformity Bias (Asch Effect)

- **Definition:** The urge to align your opinions, judgments, or behaviors with the majority group, even when you know the group's stance is incorrect.
- **Example:** Agreeing publicly with a visibly wrong answer in a group meeting simply because every single colleague before you voted for it.

### 56. Stereotype Threat

- **Definition:** A decrease in performance caused by the anxiety or fear of confirming a negative stereotype about a group you belong to.
- **Example:** Women scoring lower on a math exam when reminded of their gender right before the test compared to when no gender prompt is given.

### 57. False Uniqueness Effect

- **Definition:** The tendency to underestimate how common one's positive traits, abilities, or desirable behaviors are among the general population.
- **Example:** Assuming you are one of the very few people in your neighborhood who regularly recycles, when in reality most residents do.

#### 58. Observer Effect (Hawthorne Effect)

- **Definition:** The alteration of behavior by subjects in a study or workplace due to their awareness of being observed.
- **Example:** Factory employees working significantly faster and adhering strictly to safety protocols only while a manager holds a clipboard nearby.

#### 59. Defensive Attribution Bias

- **Definition:** Attributing blame to a victim for a severe misfortune to reassure oneself that a similar harm will not happen to them.
- **Example:** Blaming a mugging victim for "walking down the wrong street at night" to cope with the scary reality that random crime could happen to anyone.

#### 60. Ultimate Attribution Error

- **Definition:** Extending the fundamental attribution error to whole groups—attributing an out-group's bad behavior to their nature and their good behavior to luck or chance.
- **Example:** Believing a rival team won a match purely due to a lucky referee call, but losing to them because they are fundamentally dirty players.

#### 61. Bystander Effect

- **Definition:** The phenomenon where individuals are less likely to offer help to a victim when other people are present, due to diffusion of responsibility.
- **Example:** Watching someone faint in a crowded subway station and walking past because you assume one of the dozens of other onlookers will call for help.

#### 62. Social Loafing

- **Definition:** The tendency for individuals to exert less effort when working collectively in a group than when working individually.
- **Example:** Putting minimal effort into a group presentation project because you know four other teammates are sharing the workload.

#### 63. Social Facilitation

- **Definition:** The tendency for people to perform simple or well-rehearsed tasks better when in the presence of an audience.
- **Example:** Running a faster mile time during a track competition with cheering spectators than during a solitary practice run.

#### 64. Group Polarization

- **Definition:** The tendency for a group's collective decision or opinion to become more extreme than the individual members' initial positions after group discussion.
- **Example:** A committee of moderate skeptics discussing a policy and coming away from the meeting holding radical, extreme opposition to it.

## 65. Groupthink

- **Definition:** A mode of thinking in highly cohesive groups where the desire for harmony and conformity overrides realistic appraisal of alternatives.
- **Example:** An executive board launching a flawed product without dissent because team members suppress their doubts to avoid conflict.

## 66. Naïve Realism

- **Definition:** The human tendency to believe that we see the world around us objectively, and that those who disagree are uninformed, irrational, or biased.
- **Example:** Believing your stance on a controversial issue is purely logical, and concluding that anyone opposing it must have been brainwashed by media.

## 67. Projection Bias

- **Definition:** The tendency to assume that other people share your current emotional state, values, or future preferences.
- **Example:** Ordering a massive feast at a restaurant because you are starving right now, overestimating how hungry you and your friends will be in 20 minutes.

## 68. Third-Person Effect

- **Definition:** The tendency to perceive that mass media messages have a greater effect on others than on oneself.
- **Example:** Supporting a ban on certain political advertisements because you believe they easily brainwash the public, while feeling completely immune to them yourself.

## 69. Inattentional Blindness

- **Definition:** The inability to perceive an unexpected, fully visible object or event in plain sight because attention is focused on a different task.
- **Example:** The famous Simons and Chabris experiment (1999), where 50% of participants counting basketball passes completely failed to notice a person in a gorilla suit walk through the game.

## 70. Change Blindness

- **Definition:** The failure to notice significant visual changes in an environment or scene across a brief disruption or interruption.
- **Example:** A pedestrian giving directions to a stranger failing to notice that the stranger was swapped with an entirely different person while a door was briefly carried between them.

## 71. Pareidolia

- **Definition:** The psychological tendency to perceive recognizable patterns, shapes, or faces within random, ambiguous visual or auditory stimuli.
- **Example:** Looking up at a fluffy cloud formation or a water stain on a wall and distinctly seeing a human face or animal shape.

## 72. Negativity Bias

- **Definition:** The phenomenon where negative stimuli, experiences, or information capture more attention and exert a stronger psychological impact than positive ones of equal intensity.
- **Example:** Dwelling on a single harsh critique on an annual performance review for weeks while completely ignoring ten glowing compliments.

## 73. Top-Down Attention Bias

- **Definition:** The selective filtering of sensory information based on internal expectations, prior knowledge, goals, or conscious focus rather than raw environmental stimuli.
- **Example:** Searching for a lost friend in a crowded stadium by scanning exclusively for a bright red hat because you know they are wearing one.

## 74. Threat-Related Attention Bias

- **Definition:** The heightened tendency to automatically detect, monitor, and prioritize threat-relevant stimuli over neutral or positive stimuli in the environment.
- **Example:** An anxious individual instantly spotting a small spider in the far corner of a room while completely overlooking the surrounding decor.

## 75. Dichotic Listening Effect

- **Definition:** The cognitive capacity (and limitation) to focus on a specific auditory message in one ear while ignoring a different message presented simultaneously to the other ear.
- **Example:** Accurately repeating a story played into your right ear through headphones while remaining completely unaware of the language spoken into your left ear.

## 76. Selective Inattention

- **Definition:** The conscious or unconscious blocking out of sensory inputs, ideas, or feelings that cause anxiety, discomfort, or distraction from a goal.
- **Example:** Tuning out the ticking of a loud wall clock or ignoring distressing news broadcasts to stay focused on studying for an exam.

## 77. Attentional Capture

- **Definition:** The involuntary redirection of visual or auditory attention to a sudden, salient, or unexpected stimulus regardless of current goals.
- **Example:** Glancing up instantly from a book when a bright neon sign flashes or a sudden loud crash occurs nearby.

## 78. Visual Blind Spot (Scotoma)

- **Definition:** The functional gap in visual perception caused by the lack of photoreceptors where the optic nerve exits the retina, which the brain automatically fills in.
- **Example:** Closing one eye and moving a dot across a page until it temporarily disappears, illustrating that the brain normally seamlessly "paints over" this gap.

## 79. Focusing Illusion (Illusion of Focus)

- **Definition:** The cognitive bias where exaggerating the importance of a single factor leads to an inaccurate prediction of overall happiness or outcome quality.
- **Example:** Believing that moving to a sunny coastal city will make your life dramatically happier, while overestimating the impact of weather and underestimating everyday stressors like traffic and work.

## 80. Affect Heuristic

- **Definition:** The reliance on one's immediate emotional response or current mood to make judgments and decisions, rather than evaluating objective data.
- **Example:** Overestimating the success rate of a risky investment simply because you are in a cheerful, optimistic mood when reviewing the prospectus.

## 81. Halo of Love (Limerence Bias)

- **Definition:** The tendency to idealize a romantic partner during the initial phase of a relationship, interpreting red flags or negative traits as positive features.
- **Example:** Excusing a new partner's explosive anger management problems as a sign of deep "passion" and commitment rather than a warning signal.

## 82. Anger Blindness

- **Definition:** A state where intense anger severely impairs cognitive flexibility, preventing an individual from considering alternative perspectives or empathetic reasoning.
- **Example:** Becoming completely incapable of seeing that a partner's point of view might be valid during a heated couple's argument.

## 83. Emotional Reasoning

- **Definition:** A cognitive distortion where an individual assumes that their subjective emotional reactions reflect objective truth about the external world.
- **Example:** Believing "I feel anxious about taking this flight, therefore flying on this plane must be inherently dangerous."

## 84. Hot-Cold Empathy Gap

- **Definition:** The inability to accurately predict or understand your own choices, desires, or feelings when in a different visceral state (e.g., calm vs. angry, full vs. hungry).

- **Example:** Vowing while full after dinner to stick to a strict diet, but succumbing to junk food cravings the moment you feel intense hunger the next afternoon.

## 85. Affective Forecasting Bias

- **Definition:** The systematic inaccuracy in predicting how one will feel emotionally in response to future events.
- **Example:** Expecting that landing a dream job will make you permanently happy, while failing to anticipate how quickly you will adapt to the new routine.

## 86. Impact Bias

- **Definition:** The tendency to overestimate the intensity or severity of future emotional reactions to upcoming events.
- **Example:** Believing that failing an upcoming driving test will cause devastating, unbearable grief, when in reality the emotional blow will be mild.

## 87. Durability Bias

- **Definition:** The tendency to overestimate the duration or lifespan of emotional reactions to future events, expecting feelings to last longer than they do.
- **Example:** Expecting to feel heartbroken for years after a breakup, when psychological adaptation actually restores baseline happiness in a few months.

## 88. Emotional Contagion

- **Definition:** The psychological phenomenon where an individual unconsciously mirrors and adopts the emotions and expressions of those around them.
- **Example:** Feeling your mood instantly drop and becoming anxious simply by sitting in a room with a stressed, agitated colleague.

## 89. Mood Maintenance Bias

- **Definition:** The tendency for people in a positive mood to avoid risky, analytical, or unpleasant tasks in order to preserve their current good feelings.
- **Example:** Delaying a difficult performance review conversation with an employee on a Friday afternoon because you want to preserve your upbeat weekend mood.

## 90. Selective Attention to Partner's Flaws

- **Definition:** The post-honeymoon tendency to disproportionately notice, track, and dwell on a partner's negative behaviors while ignoring their positive actions.
- **Example:** Noticing every single time your partner forgets to take out the trash while failing to acknowledge the meals they cooked for you all week.

## 91. Negative Intention Attribution

- **Definition:** The habit of interpreting a partner's ambiguous or neutral behaviors as deliberate, hostile, or malicious acts targeted at you.

- **Example:** Assuming your partner didn't reply to your text message immediately because she is "trying to punish you," when she was simply in a meeting.

## 92. Catastrophization in Conflict

- **Definition:** Interpreting a routine disagreement or minor argument as a catastrophic threat signaling the immediate end of the entire relationship.
- **Example:** Believing "our relationship is completely doomed and we are going to break up" after having a single heated debate over weekend plans.

## 93. Rosy Retrospection of Past Relationships

- **Definition:** The romantic idealization of past exes and former relationships by selectively remembering fond moments while erasing the painful conflicts that caused the breakup.
- **Example:** Thinking "things were so much simpler with my ex" while completely forgetting the constant arguments and incompatibility that ended that relationship.

## 94. Familiarity Bias in Partner Choice

- **Definition:** The tendency to unconsciously select partners who recreate familiar childhood relational dynamics, even when those dynamics were emotionally unhealthy.
- **Example:** Repeatedly pursuing emotionally distant or unavailable partners because that pattern mirrors the dynamic you experienced with an absent parent growing up.

## 95. Psychological Reactance in Relationships

- **Definition:** The intense urge to resist, do the opposite, or protect your autonomy when a partner demands, mandates, or pressures you to adopt a specific behavior.
- **Example:** Refusing to clean the garage simply because your partner demanded you do it right now, even though you were already planning to clean it yourself.

## 96. Relational Polarization

- **Definition:** The phenomenon where partners adopt opposing, rigid extreme roles during arguments, driving each other further toward opposite ends of a spectrum.
- **Example:** One partner becoming hyper-logical and cold during a debate, which pushes the other partner to become increasingly emotional and reactive.

## 97. Relational Projection

- **Definition:** Unconsciously attributing your own unacknowledged insecurities, guilty feelings, or unacceptable urges onto your partner.
- **Example:** Accusing your partner of being flirtatious with co-workers because you are secretly struggling with feelings of attraction toward a colleague.

## 98. Demand-Withdraw Pattern

- **Definition:** A damaging interaction cycle where one partner pushes for change through criticism or emotional pressure, causing the other partner to retreat and stonewall.
- **Example:** Continually pressing your partner to talk about relationship issues right now, which causes them to physically walk away or go completely silent.

## 99. Mind Reading in Couples

- **Definition:** The mistaken belief that you can accurately know your partner's unexpressed thoughts, feelings, or motives without asking or expecting them to know yours.
- **Example:** Getting angry at your partner for not comforting you after a tough day, assuming "if they truly loved me, they would just know what I need."

## 100. Comparative Bias of Social Networks

- **Definition:** Evaluating the quality and health of your own relationship unfairly against the curated, idealized highlights displayed by other couples online.
- **Example:** Feeling sudden dissatisfaction with your quiet evening routine after scrolling past photos of friends going on elaborate romantic vacations.

## 101. Confirmation Bias in Relationships

- **Definition:** Filtering your partner's actions so that you only notice evidence confirming an established narrative about them, while ignoring contradictory behaviours.
- **Example:** Convinced your partner is "selfish," you highlight every instance they prioritize their own schedule while writing off their thoughtful gestures as mere exceptions.

## 102. Decoy Effect (Asymmetric Dominance)

- **Definition:** The phenomenon where adding a deliberately inferior third option changes consumer preference between two original choices, making one look significantly more attractive.
- **Example:** A magazine offering a digital subscription for \$60, print for \$100, and print+digital for \$100—the middle option exists solely to drive sales toward the \$100 bundle.

## 103. Compromise Effect

- **Definition:** The tendency for consumers to avoid extreme choices and instead select the middle option when presented with a tiered set of three choices.
- **Example:** Choosing the \$25 mid-tier wine on a restaurant menu when faced with choices priced at \$15, \$25, and \$50.

## 104. Scarcity Effect

- **Definition:** A cognitive bias where an object or opportunity is perceived as having higher value simply because its availability is limited.

- **Example:** An online booking banner stating "Only 2 rooms left at this price!" triggering an immediate urge to book.

### 105. Money Illusion

- **Definition:** The tendency to think of wealth and income in nominal monetary terms rather than in real terms adjusted for inflation.
- **Example:** Feeling happy about receiving a 2% salary raise during a year when inflation is at 5%, despite actually losing purchasing power.

### 106. Expense Aversion (Pain of Paying)

- **Definition:** The immediate psychological discomfort or distress associated with spending money during a financial transaction.
- **Example:** Spending less when paying with physical cash compared to tapping a credit card, because handing over paper bills feels like a direct loss.

### 107. Identifiable Victim Effect

- **Definition:** The tendency to offer greater aid or resources when a single, specific, named individual is in hardship, compared to a large, abstract group.
- **Example:** A charity campaign raising millions for a single named child needing surgery while struggling to raise funds for a broad regional medical crisis.

### 108. Veblen Effect (Snob Appeal)

- **Definition:** A phenomenon in luxury economics where demand for a good increases as its price increases, because high cost signals high social status.
- **Example:** Preferring a luxury designer handbag over an identical unbranded bag specifically because the \$3,000 price tag communicates exclusivity.

### 109. Present Bias

- **Definition:** The tendency to settle for a smaller, immediate reward rather than waiting for a larger, future reward when making decisions in the moment.
- **Example:** Choosing to spend \$100 on a lavish dinner tonight instead of setting it aside toward a retirement savings account.

### 110. Hyperbolic Discounting

- **Definition:** A mathematical model of time preference where people discount the value of future outcomes much more steeply over short horizons than long ones.
- **Example:** Preferring \$50 today over \$60 tomorrow, but comfortably choosing \$60 in 365 days over \$50 in 364 days, despite the time gap being identical.

### 111. Affirmation of the Consequent

- **Definition:** A formal logical error where one mistakenly deduces that the antecedent (cause) must be true simply because the consequent (effect) is observed.

- **Example:** Reasoning that "If it rains, the street gets wet. The street is wet, therefore it rained"—ignoring that a burst fire hydrant could also wet the street.

## 112. Denial of the Antecedent

- **Definition:** A formal logical error where one mistakenly assumes that if a specific cause is absent, the effect cannot possibly occur.
- **Example:** Arguing "If you study hard, you will pass the exam. You didn't study hard, therefore you will fail"—overlooking that prior knowledge or easy questions could still lead to a pass.

## 113. Hasty Generalization

- **Definition:** Drawing an expansive, sweeping conclusion about an entire group or population based on a sample size that is far too small.
- **Example:** Meeting two rude drivers in a city and immediately declaring that every driver living in that city is aggressive.

## 114. False Dichotomy (Either/Or Fallacy)

- **Definition:** Misrepresenting a complex situation by presenting only two mutually exclusive choices when subtle middle options actually exist.
- **Example:** Insisting "You are either completely with us or you are our enemy," which completely erases neutral or nuanced perspectives.

## 115. Post Hoc Fallacy (Post Hoc Ergo Propter Hoc)

- **Definition:** The mistaken assumption that because one event followed another in time, the earlier event must have directly caused the later one.
- **Example:** Wearing a specific pair of socks on a day your favorite team wins, then believing the socks were the cause of their victory.

## 116. Straw Man Fallacy

- **Definition:** Distorting, oversimplifying, or exaggerating an opponent's argument so it becomes easy to attack and disprove.
- **Example:** Claiming that someone who supports reducing a city budget "wants to leave our neighborhoods completely lawless and unprotected."

## 117. Ad Hominem

- **Definition:** Attacking the opponent's personal character, background, or physical traits instead of addressing the actual substance of their argument.
- **Example:** Dismissing a financial expert's economic analysis by saying, "Why should we listen to you about money when you wear cheap suits?"

## 118. Appeal to Authority (Argumentum ad Verecundiam)

- **Definition:** Asserting that a claim must be true solely because an authority figure or expert endorsed it, especially outside their domain of expertise.

- **Example:** Believing a medical claim about diet solely because a famous quantum physicist recommended it on a talk show.

#### 119. Appeal to Tradition (*Argumentum ad Antiquitatem*)

- **Definition:** Arguing that a practice, belief, or policy is correct or superior simply because it has been followed for a long time.
- **Example:** Refusing to update an inefficient paper archiving system because "this is the way our company has done things for fifty years."

#### 120. Appeal to Nature

- **Definition:** The fallacious assumption that anything natural is inherently good or healthy, while anything artificial or synthetic is bad.
- **Example:** Assuming a wild herbal extract must be safe and harmless simply because it comes from nature, while viewing a manufactured medicine as dangerous.

#### 121. Appeal to Common Knowledge (*Argumentum ad Populum*)

- **Definition:** Claiming an idea or proposition is true simply because the majority of people believe it to be true.
- **Example:** Arguing that a rumour about a local politician must be accurate because "everybody in town already knows it's true."

#### 122. Slippery Slope Fallacy

- **Definition:** Asserting without sufficient evidence that taking one initial, minor step will inevitably trigger a chain reaction leading to extreme disaster.
- **Example:** Claiming that allowing students to submit an assignment one day late will eventually lead to total academic collapse and no one ever graduating.

#### 123. Circular Reasoning (*Begging the Question*)

- **Definition:** An argument where the conclusion is assumed as a premise, meaning the premise simply restates the conclusion in different words.
- **Example:** Stating "Our product is the most high-quality option available because we make superior, top-tier goods."

#### 124. Semantic Equivocation (*Semantic Confusion*)

- **Definition:** Using a key word or phrase with multiple meanings ambiguously within an argument to mislead or obscure the truth.
- **Example:** Arguing "Noisy children are a real headache, and aspirin makes headaches go away, so aspirin will make noisy children quiet down."

#### 125. Statistical Bias (*Selection Bias*)

- **Definition:** Distorting data or conclusions because the sample gathered is not truly representative of the population being studied.

- **Example:** Polling visitors leaving a gym to measure national exercise habits, resulting in an inflated statistic about average daily workouts.

#### 126. Regression to the Mean Neglect

- **Definition:** Failing to recognize that extreme performance or unusual events naturally move back toward the average on subsequent trials.
- **Example:** Blaming a star athlete for "slumping" after an extraordinary game, when they are simply returning to their normal baseline score.

#### 127. Argument from Ignorance (Argumentum ad Ignorantiam)

- **Definition:** Asserting that a claim must be true simply because it has not yet been proven false (or vice versa).
- **Example:** Believing that alien spacecraft are actively visiting Earth because scientists cannot definitively prove that they aren't.

#### 128. Aesthetic-Usability Effect

- **Definition:** The tendency for people to perceive visually pleasing designs as more usable, intuitive, and efficient than less attractive ones, regardless of actual functionality.
- **Example:** Users rating a sleek, beautifully designed app as easier to navigate than a plain one, even when both feature the exact same interface layout.

#### 129. Attribute Substitution

- **Definition:** A process where an individual substitutes a complex, computationally demanding judgment with a simpler, heuristic judgment without realizing the switch took place.
- **Example:** Asking someone "How satisfied are you with your life overall?" and having them unconsciously answer based on "What is my mood right now?"

#### 130. Tachypsychia

- **Definition:** An altered state of perception where time appears to slow down or speed up significantly, often triggered by extreme stress, exertion, or trauma.
- **Example:** A driver involved in a near-miss car accident describing the event as if it unfolded in slow motion.

#### 131. Time-Saving Bias

- **Definition:** Underestimating time saved when increasing speed from a low baseline, and overestimating time saved when increasing speed from an already high baseline.
- **Example:** Believing that accelerating from 70 mph to 80 mph saves more driving time than accelerating from 20 mph to 30 mph over the same distance.

#### 132. Travis Syndrome

- **Definition:** The tendency to overestimate the importance, uniqueness, or superiority of the present era relative to historical periods.
- **Example:** Declaring that current social media challenges represent a level of cultural decline never before witnessed in human history.

### 133. Hard-Easy Effect

- **Definition:** The tendency to overestimate one's probability of success on difficult tasks and underestimate one's performance on easy tasks.
- **Example:** Expressing high confidence before attempting a notoriously complex puzzle, but second-guessing oneself on a basic trivia quiz.

### 134. Hot-Hand Fallacy

- **Definition:** The belief that a person who has experienced success with a random event has a greater chance of continued success in subsequent attempts.
- **Example:** Assuming a basketball player who has made three shots in a row is "on fire" and guaranteed to make the next shot, regardless of defence.

### 135. Insensitivity to Sample Size

- **Definition:** Underestimating the degree of variation expected in small samples, leading to unjustified confidence in small-sample findings.
- **Example:** Assuming a survey of 10 people accurately reflects the opinions of an entire nation of millions.

### 136. Interoceptive Bias (Hungry Judge Effect)

- **Definition:** The tendency for internal bodily sensations (such as hunger, fatigue, or discomfort) to systematically bias judgments about external matters.
- **Example:** Parole boards granting favourable rulings significantly more often immediately following a meal break than right before one.

### 137. Conservatism Bias (Regressive Bias - Memory)

- **Definition:** A memory distortion where extreme high values or probabilities are recalled as lower, and extreme low values are recalled as higher, skewing memories toward the average.
- **Example:** Remembering a record-breaking hot day as having been only moderately warm years after the event occurred.

### 138. Subadditivity Effect

- **Definition:** Judging the estimated probability of a whole event to be less than the combined sum of the probabilities of its individual, mutually exclusive components.
- **Example:** Estimating the likelihood of dying from "any disease" as lower than the combined estimates of dying from heart disease, cancer, or stroke separately.

### 139. Systematic Bias (Regression-Based)

- **Definition:** Systematic distortion in judgment occurring when targets of comparative evaluation are subject to uneven or asymmetric statistical regression effects.
- **Example:** Evaluating employee growth metrics without accounting for the natural regression toward the mean of extreme performance scores.

#### 140. Unit Bias

- **Definition:** The tendency to perceive a single unit or standard serving size as the appropriate amount to consume, regardless of individual appetite or needs.
- **Example:** Eating an entire large portion of food served on a single plate simply because it is presented as a single meal unit.

#### 141. Weber-Fechner Law Effect

- **Definition:** Difficulty in perceiving or distinguishing small differences between large quantities compared to the same absolute differences between small quantities.
- **Example:** Easily noticing the difference between holding 1 lb and 2 lbs, but failing to notice the difference between holding 50 lbs and 51 lbs.

#### 142. Conservatism Bias (Belief Revision)

- **Definition:** The tendency to insufficiently revise one's initial beliefs or forecasts when presented with new, conflicting evidence.
- **Example:** A manager slightly adjusting a sales forecast upward after receiving overwhelming data showing demand has quadrupled.

#### 143. Exaggerated Expectation

- **Definition:** The systematic inclination to predict outcomes that are significantly more extreme than what actually occurs.
- **Example:** Expecting a minor policy update to result in immediate, radical transformation across an entire organization.

#### 144. Hedonic Recall Bias

- **Definition:** A distortion where contentment with one's current financial situation causes overestimation of past earnings, while dissatisfaction causes underestimation.
- **Example:** Someone happy with their salary remembering their starting pay as higher than it actually was on their employment contract.

#### 145. Illusion of Validity

- **Definition:** Overestimating the accuracy of one's judgments when available information appears consistent or highly correlated, even if the data is redundant or unreliable.
- **Example:** Feeling absolute certainty about a candidate's future job performance based on an interview where all interviewers agreed on a single trait.

#### 146. Outcome Bias

- **Definition:** Evaluating the quality of a decision based solely on its ultimate outcome rather than on the quality of the decision process at the time it was made.
- **Example:** Calling a risky, ill-advised financial gamble "a smart strategy" simply because it happened to pay off.

#### 147. Restraint Bias

- **Definition:** Overestimating one's self-control and ability to resist temptation when exposed to high-temptation environments.
- **Example:** Buying bulk snacks while on a strict diet, believing you will easily exercise the restraint needed to eat only one per week.

#### 148. Sexual Overperception / Underperception Bias

- **Definition:** The tendency to systematically overestimate (overperception) or underestimate (underperception) another individual's sexual interest in oneself.
- **Example:** Misinterpreting polite professional friendliness as romantic interest, or failing to recognize overt romantic flirting.

#### 149. Curse of Knowledge

- **Definition:** The difficulty well-informed individuals face when trying to think about a problem from the perspective of someone with less information.
- **Example:** A software engineer giving instructions using complex technical jargon to a beginner who has never used a computer before.

#### 150. Extrinsic Incentives Bias

- **Definition:** Viewing others' behaviours as driven primarily by external motivators (money, status), while viewing one's own behaviours as driven by internal motivators (learning, values).
- **Example:** Assuming colleagues only work hard for their annual bonuses, while believing you work hard due to personal dedication and pride.

#### 151. Illusion of Transparency

- **Definition:** Overestimating how easily one's internal emotional state is noticed by others, and overestimating how well one understands others' feelings.
- **Example:** Feeling convinced that everyone in the audience can see how terrified you are during a public speech, even though you appear composed.

#### 152. Naïve Cynicism

- **Definition:** Expecting other people to exhibit more self-serving, egocentric bias in their actions and motivations than oneself.
- **Example:** Assuming a peer's volunteer effort is purely a publicity stunt to improve their resume, while viewing your own volunteer work as selfless.

#### 153. Spotlight Effect

- **Definition:** Overestimating the degree to which other people notice and evaluate one's physical appearance, mistakes, or presence.
- **Example:** Believing everyone in a crowded room is staring at a small stain on your shirt when almost no one notices it.

#### 154. Worse-Than-Average Effect

- **Definition:** The tendency to believe oneself to be worse than peers at performing tasks that are unusually difficult or unfamiliar.
- **Example:** Assuming you are worse than average at juggling, ignoring that most people cannot juggle at all.

#### 155. Ambiguity Effect

- **Definition:** Selecting options with a known probability of a favourable outcome over options where the probabilities are unknown or unclear.
- **Example:** Choosing an investment with a guaranteed 3% return over an unfamiliar business opportunity that could yield 15% or lose money.

#### 156. Authority Bias

- **Definition:** Attributing greater weight, accuracy, or validity to the opinions of an authority figure regardless of the underlying evidence.
- **Example:** Following a celebrity's medical advice without verifying whether their claims are supported by medical science.

#### 157. Automation Bias

- **Definition:** Over-relying on automated systems, leading to errors when automated information overrides human judgment or correct manual data.
- **Example:** A driver following a GPS navigation system off a dead-end road because they trusted the automated screen over physical road signs.

#### 158. Dread Aversion

- **Definition:** Experiencing disproportionately greater psychological discomfort from anticipating negative events than pleasure from anticipating positive ones.
- **Example:** Worrying intensely for weeks about a brief dental procedure, overshadowing the enjoyment of an upcoming vacation.

#### 159. Compassion Fade

- **Definition:** Decreasing empathy and willingness to help as the number of victims increases, feeling more compassion for one named individual than for a crowd.
- **Example:** Donating generously to help a single named child in need, but withholding support for a relief fund aiding 100,000 refugees.

#### 160. Neglect of Probability

- **Definition:** Disregarding actual mathematical probabilities when making decisions under conditions of uncertainty, driven instead by emotional intensity.
- **Example:** Refusing to fly due to terror of plane crashes while regularly speeding in a car without wearing a seatbelt.

#### 161. Non-Adaptive Choice Switching (Hot Stove Effect)

- **Definition:** Avoiding an optimal choice simply because it produced a single bad outcome in the past, even if the choice remains statistically best.
- **Example:** Refusing to take an optimal route home after encountering a rare construction delay on it once.

#### 162. Prevention Bias

- **Definition:** Perceiving that money spent on risk prevention buys greater safety than an equal amount spent on detection and response, regardless of efficacy.
- **Example:** Overfunding preventative security measures while severely underfunding breach detection tools that yield identical protection.

#### 163. Pseudocertainty Effect

- **Definition:** Making risk-averse choices when expected outcomes are framed positively, but making risk-seeking choices when outcomes are framed negatively.
- **Example:** Preferring a guaranteed payout when choosing between gains, but taking a risky gamble to avoid a guaranteed loss.

#### 164. Risk Compensation (Peltzman Effect)

- **Definition:** Increasing risky behaviour when perceived safety measures or protective equipment are introduced.
- **Example:** Driving faster or less cautiously after installing advanced anti-lock brakes and lane-assist features on a vehicle.

#### 165. Zero-Risk Bias

- **Definition:** Preferring to completely eliminate a small, specific risk rather than achieving a larger reduction in a greater overall risk.
- **Example:** Spending a full budget to reduce a 1% hazard to 0% rather than reducing a 20% hazard down to 5%.

#### 166. Action Bias

- **Definition:** Preferring to take action even when remaining passive or doing nothing would produce better results.
- **Example:** A soccer goalkeeper diving to one side during a penalty kick rather than staying in the middle, even though staying put yields a higher save rate.

#### 167. Additive Bias

- **Definition:** Solving problems by adding elements or complexity, while failing to consider subtraction or simplification as a solution.
- **Example:** Adding new rules to an organizational process to fix an issue instead of removing the rule that caused the problem.

#### 168. Ballot Order Effect

- **Definition:** The tendency for candidates listed first on a voting ballot to receive a small but statistically significant increase in votes.
- **Example:** A candidate winning extra votes purely because their name appears at the top of the ballot list.

#### 169. Cheerleader Effect

- **Definition:** Perceiving individuals as more attractive when they are seen in a group setting than when seen in isolation.
- **Example:** Viewing members of a sports team or music group as more appealing in a group photo than in individual portraits.

#### 191. Disposition Effect

- **Definition:** The tendency for investors to sell assets that have increased in value while holding onto assets that have dropped in value.
- **Example:** Selling a winning stock too early to lock in gains while keeping a falling stock in hopes that it recovers.

#### 192. Distinction Bias

- **Definition:** Viewing two options as more distinct or different when evaluating them simultaneously than when evaluating them separately.
- **Example:** Noticing minute quality differences between two TVs side-by-side in a store that would be unnoticeable once brought home.

#### 193. Less-Is-Better Effect

- **Definition:** Preferring a smaller, complete set over a larger, incomplete set when evaluated separately, even if the larger set offers more value.
- **Example:** Valuing a full set of 8 pristine dishes higher than a set of 20 dishes that includes 2 broken pieces when judged independently.

#### 195. Phantom Effect

- **Definition:** Allowing decision choices to be influenced by attractive options that are ultimately unavailable or out of stock.
- **Example:** Entering a dealership to view a heavily discounted car model that was just sold, then settling for a costlier alternative.

#### 196. Normalcy Bias

- **Definition:** Disbelieving or minimizing threat warnings, leading to a failure to prepare for or respond to unprecedented disasters.
- **Example:** Delaying evacuation during an approaching flood because severe flooding has never happened in the area before.

#### 198. Scope Neglect (Scope Insensitivity)

- **Definition:** Failing to scale evaluations or financial valuations proportionally to the size or magnitude of a problem.
- **Example:** Willingness to donate roughly the same amount of money to save 2,000 birds as to save 200,000 birds from an oil spill.

#### 199. Doubling-Back Aversion

- **Definition:** Avoiding retracing steps or restarting a task, even when doing so saves time, because it feels like erasing past effort.
- **Example:** Continuing along an incorrect driving route to avoid turning around, even though making a U-turn would reach the destination faster.

#### 202. Functional Fixedness

- **Definition:** A cognitive limitation where an object is seen as functioning only in its traditional or intended manner.
- **Example:** Searching for a screwdriver to tighten a loose screw instead of using a coin or key readily available in your pocket.

#### 204. Plan Continuation Bias

- **Definition:** Failing to revise or abandon an original plan despite clear evidence that conditions have changed and the plan is no longer safe or viable.
- **Example:** Pilots continuing a landing approach into severe, dangerous weather because they are focused on completing the planned flight path.

#### 205. Semmelweis Reflex

- **Definition:** Rejecting new scientific evidence or knowledge because it contradicts established paradigms or accepted beliefs.
- **Example:** Historic resistance by medical professionals to handwashing protocols despite overwhelming evidence of germ transmission.

#### 206. Shared Information Bias

- **Definition:** The tendency for groups to spend time discussing information everyone already knows rather than unshared knowledge held by single members.
- **Example:** A hiring committee spending an hour discussing a candidate's public resume rather than unique feedback from an interviewer.

#### 208. Well-Travelled Road Effect

- **Definition:** Underestimating the travel time for frequently travelled routes while overestimating travel time for unfamiliar routes.
- **Example:** Feeling as though the daily commute home takes far less time than a trip of equal distance to a new neighbourhood.

## 210. Reactance

- **Definition:** The urge to do the opposite of what is requested or commanded to protect one's perceived freedom of choice.
- **Example:** Deliberately refusing to follow a rule simply because a supervisor forcefully demanded compliance.

## 212. Law of the Instrument (Maslow's Hammer)

- **Definition:** Over-relying on a familiar tool or method to solve every problem, regardless of suitability ("If all you have is a hammer, everything looks like a nail").
- **Example:** Attempting to solve every operational organizational issue using spreadsheet macros because macros are your primary skill.

## 213. Not Invented Here

- **Definition:** Avoiding the adoption of ideas, products, or standards developed outside one's organization or culture.
- **Example:** A software team writing custom internal tools from scratch instead of adopting superior, widely tested open-source frameworks.

## 214. Reactive Devaluation

- **Definition:** Dismissing or devaluing a proposal simply because it originated from an adversary or opposing group.
- **Example:** Rejecting a compromise bill in parliament solely because it was authored by the opposing political party.

## 215. Social Comparison Bias

- **Definition:** Preferring job or award candidates who do not pose a threat to one's own relative strengths or standing within an organization.
- **Example:** A manager choosing not to hire a highly skilled applicant who might outperform them or expose their weaknesses.

## 216. Agent Detection Bias

- **Definition:** The inclination to presume the purposeful intervention of an intelligent agent behind natural or random occurrences.
- **Example:** Hearing a sudden noise in an old house at night and assuming an intruder or spirit caused it rather than settling wood.

## 217. Availability Cascade

- **Definition:** A self-reinforcing process where a collective belief gains widespread credibility through repeated public discourse.
- **Example:** A media story about a minor safety issue triggering public alarm, leading to news coverage that reinforces the belief of danger.

## 218. Cognitive Dissonance

- **Definition:** Psychological distress experienced when holding contradictory beliefs, values, or ideas simultaneously, or acting against them.
- **Example:** Continuing to smoke cigarettes while fully aware that smoking causes severe long-term health issues.

## 219. Common Source Bias

- **Definition:** Combining or comparing research studies that rely on the exact same underlying source data or methodologies, creating false corroboration.
- **Example:** Citing five separate news articles as independent confirmation of a story when all five republished a single press release.

## 220. False Priors

- **Definition:** Incorrect initial assumptions that distort the evaluation of new factual evidence, leading to invalid conclusions.
- **Example:** Assuming a new technology is inherently unsafe, leading to interpreting all performance test anomalies as evidence of danger.

## 221. Fluency Heuristic

- **Definition:** Assuming that ideas or statements communicated smoothly, clearly, or eloquently carry higher truth or value than less fluent ones.
- **Example:** Believing a polished sales presentation over an unpolished, evidence-backed report written by an engineer.

## 223. Groupshift

- **Definition:** The tendency for group discussions to push individual members toward a more extreme position than they held prior to the meeting.
- **Example:** A moderately cautious investment committee deciding on a highly risky financial strategy after a passionate group discussion.

## 224. Illusion of Explanatory Depth

- **Definition:** Believing one understands complex mechanisms or systems far better than one actually does, revealed when asked to explain them step-by-step.
- **Example:** Believing you fully understand how a zipper or bicycle works until asked to draw and explain the precise mechanics.

## 225. Illusory Truth Effect

- **Definition:** Believing a statement is true simply because it has been repeated multiple times, regardless of its factual validity.
- **Example:** Accepting a false health myth as fact after hearing it repeated across multiple conversations and media outlets over years.

## 226. Probability Matching

- **Definition:** Distributing choices to match the underlying probabilities of outcomes in a random setup, rather than consistently choosing the highest-probability option.
- **Example:** Guessing "Red" 70% of the time and "Green" 30% of the time on a machine that yields Red 70% of the time, instead of guessing Red 100% of the time.

## 227. Rhyme-as-Reason Effect

- **Definition:** Perceiving statements or slogans as more truthful or insightful simply because they rhyme.
- **Example:** Rating the advice "If it doesn't fit, you must acquit" as more compelling than "If it doesn't fit, you should declare innocence."

## 228. Quantification Bias (McNamara Fallacy)

- **Definition:** Relying exclusively on measurable metrics while ignoring crucial qualitative factors that cannot be easily measured.
- **Example:** Measuring educational success solely through standardized test scores while ignoring student engagement and critical thinking skills.

## 229. Salience Bias (von Restorff Effect)

- **Definition:** Focusing on items or features that are visually or emotionally prominent while ignoring less striking but relevant details.
- **Example:** Remembering an advertisement solely because it featured a brightly coloured mascot, while forgetting the product being sold.

## 230. Saying-Is-Believing Effect

- **Definition:** Tailoring a message to suit an audience's preferences and subsequently adopting that modified message as one's own true belief.
- **Example:** Expressing enthusiasm about a project during a presentation to impress a supervisor, and later believing you actually loved the project.

## 231. Selection Bias

- **Definition:** Distortion resulting from non-random sampling, causing the sample group to be unrepresentative of the total population.
- **Example:** Running an online survey to measure national internet literacy, which systematically excludes individuals without internet access.

## 232. Truth Bias

- **Definition:** An implicit tendency to accept incoming communication from others as truthful, regardless of whether the speaker is lying.
- **Example:** Believing a stranger's directions in an unfamiliar city without considering that they might be mistaken or deceptive.

### 233. Barnum Effect (Forer Effect)

- **Definition:** Giving high accuracy ratings to vague, general personality descriptions that could apply to almost anyone.
- **Example:** Reading a generic daily horoscope and feeling amazed at how accurately it describes your unique personality.

### 234. Belief Bias

- **Definition:** Evaluating the logical validity of an argument based on how believable its conclusion is rather than whether the logic holds.
- **Example:** Accepting a flawed, illogical argument because you happen to agree with the final statement it makes.

### 235. Berkson's Paradox

- **Definition:** A statistical illusion where two independent traits appear negatively correlated due to selection bias in the sample studied.
- **Example:** Concluding that attractive people are less agreeable because you only sample people in your personal dating history.

### 236. Clustering Illusion

- **Definition:** Overestimating the importance of small clusters or runs in random data, perceiving deliberate patterns in randomness.
- **Example:** Seeing a pattern or "streak" in a roulette wheel landing on red three times in a row.

### 238. Congruence Bias

- **Definition:** Testing a hypothesis exclusively by searching for direct evidence, rather than testing alternative hypotheses that could disprove it.
- **Example:** Testing whether a computer bug is caused by software by running software tests, without testing for potential hardware failures.

### 239. Extension Neglect

- **Definition:** Ignoring the sample size or overall scope when evaluating the relevance, probability, or severity of an outcome.
- **Example:** Fearing a 1% risk of a disaster in a small town equally to a 1% risk of that disaster occurring across an entire country.

### 240. Gender Bias

- **Definition:** Implicit or explicit prejudice and stereotyping based on gender, affecting evaluations, opportunities, and assumptions.
- **Example:** Unconsciously assuming a doctor referred to in a story is male and a nurse is female in the absence of explicit information.

#### 241. Illusory Correlation

- **Definition:** Perceiving a relationship between two events or variables when no actual statistical relationship exists.
- **Example:** Believing that arthritis pain reliably flares up whenever the weather changes, despite studies showing no correlation.

#### 242. Information Bias

- **Definition:** Seeking additional data even when that information cannot alter the final choice or decision.
- **Example:** Requesting expensive additional medical tests when the treatment plan will remain identical regardless of the test results.

#### 243. Observer-Expectancy Effect

- **Definition:** When a researcher's subtle expectations unconsciously influence the behaviour of participants or the interpretation of experiment data.
- **Example:** A trial researcher inadvertently giving subtle encouraging cues to participants receiving a new drug compared to those on placebo.

#### 244. Overconfidence Effect

- **Definition:** Holding confidence in one's knowledge or answers that is significantly higher than objective accuracy warrants.
- **Example:** Stating you are "100% certain" of an answer on a trivia question that actually turns out to be incorrect.

#### 246. Subjective Validation

- **Definition:** Perceiving statements or coincidences as meaningful and true if one's personal beliefs demand them to be connected.
- **Example:** Believing a random dream was a prophetic vision because a minor detail matched an event that happened the next day.

#### 247. Survivorship Bias

- **Definition:** Concentrating on successful individuals or items that survived a process while overlooking failures that are no longer visible.
- **Example:** Studying successful college dropouts like Steve Jobs to conclude that college is unnecessary, ignoring dropouts who failed.

#### 248. Unconscious Bias (Implicit Bias)

- **Definition:** Automatic, underlying attitudes and stereotypes that influence understanding, actions, and decisions without conscious awareness.
- **Example:** Making immediate, subtle assumptions about a job applicant's competence based on their accent or name.

#### 249. Value Selection Bias

- **Definition:** Relying uncritically on pre-existing numerical data when reasoning in unfamiliar contexts instead of running new calculations.
- **Example:** Using last year's outdated cost estimates for a new construction project rather than calculating current material costs.

#### 250. Apophenia

- **Definition:** The general inclination to perceive meaningful connections or patterns between completely unrelated things.
- **Example:** Connecting random historical dates, lottery numbers, and news events to construct a grand theory about the world.

#### 251. Assumed Similarity Bias

- **Definition:** Assuming that other people possess traits, values, and characteristics more similar to oneself than is actually true.
- **Example:** Believing that a new colleague shares your work style, humour, and lifestyle preferences simply because you get along well.

#### 252. Context Neglect Bias

- **Definition:** Overlooking the social, cultural, and human context when attempting to solve technological or operational challenges.
- **Example:** Designing a high-tech medical device for rural clinics without considering local electricity stability or training access.

#### 253. Domain Neglect Bias

- **Definition:** Neglecting crucial domain-specific knowledge when attempting to solve complex interdisciplinary problems.
- **Example:** Data scientists attempting to solve epidemiological challenges using purely statistical models without consulting public health experts.

#### 254. Embodiment Bias

- **Definition:** Attributing properties and meanings to external objects or events based on the physical capacities and constraints of one's own body.
- **Example:** Judging an obstacle or distance as "too far" or "too heavy" based on personal physical strength rather than objective measurements.

#### 255. Form-Function Attribution Bias

- **Definition:** Systematically misattributing functional capabilities to a robot or system based purely on its external physical appearance.
- **Example:** Expecting a humanoid-looking service robot to possess high emotional intelligence simply because it has human-like facial features.

#### 256. G.I. Joe Fallacy

- **Definition:** The mistaken belief that simply knowing about a cognitive bias is sufficient to prevent or overcome its effects.
- **Example:** Reading a list of cognitive biases and assuming you are now immune to fallacious thinking in your everyday decisions.

#### 257. Group Attribution Error

- **Definition:** Believing that the traits or opinions of an individual group member reflect the entire group, or that group decisions reflect individual preferences.
- **Example:** Assuming an entire company holds radical political views because one outspoken executive expressed those views publicly.

#### 258. Hostile Attribution Bias

- **Definition:** The tendency to interpret ambiguous or benign behaviours from others as intentionally hostile or aggressive.
- **Example:** Assuming someone who bumped into you in a crowded hallway did so on purpose to insult or start a confrontation.

#### 260. Intentionality Bias

- **Definition:** Judging accidental human actions or unplanned events to be deliberate, goal-directed interventions.
- **Example:** Believing a co-worker accidentally spilling coffee on your desk was a deliberate act of sabotage.

#### 261. Just-World Fallacy

- **Definition:** Believing that the world is fundamentally fair, leading people to rationalize undeserved suffering by blaming victims for their misfortunes.
- **Example:** Assuming a scam victim must have been greedy or foolish to deserve losing their life savings.

#### 262. Motonormativity (Windshield Bias / Car Brain)

- **Definition:** Assuming motor vehicle use is an unquestioned social norm, causing people to discount harms caused by driving compared to other behaviours.
- **Example:** Viewing free street parking as a fundamental right while considering public transit subsidies as wasteful government spending.

#### 263. Plant Blindness

- **Definition:** The tendency to ignore plant species in one's environment, failing to recognize their diversity, role, and importance to life on Earth.
- **Example:** Looking at a vibrant forest landscape and perceiving it merely as a uniform green backdrop rather than a complex ecosystem of distinct flora.

#### 264. Pro-Innovation Bias

- **Definition:** Holding excessive optimism regarding an invention's usefulness across society while ignoring its drawbacks and limitations.
- **Example:** Assuming that adopting AI tools in education will automatically replace teachers and solve all learning disparities.

#### 265. Proportionality Bias

- **Definition:** The tendency to assume that major, impactful events must have equally large, complex causes, fuelling conspiracy theories.
- **Example:** Disbelieving that a single gunman acting alone could assassinate a major world leader, assuming a massive cover-up must be behind it.

#### 266. Puritanical Bias

- **Definition:** Attributing undesirable outcomes or wrongdoings to individual moral failure or lack of discipline rather than systemic determinants.
- **Example:** Blaming high debt entirely on personal irresponsibility while ignoring wage stagnation and rising medical costs.

#### 267. Surrogation

- **Definition:** Conflating a metric chosen to measure a strategy with the strategic goal itself, treating the metric as the ultimate objective.
- **Example:** A call center focusing entirely on shortening average call duration, resulting in employees hanging up on customers to hit targets.

#### 268. System Justification

- **Definition:** The psychological urge to defend, bolster, and rationalize existing social, economic, and political structures over alternatives.
- **Example:** Opposing workplace reforms because "the current hierarchy has worked for generations," even when it harms individual interests.

#### 269. Teleological Bias

- **Definition:** Over-attributing purpose, intention, or goal-directed design to entities and natural events that arose without conscious intent.
- **Example:** Believing that clouds exist specifically to bring rain to crops and trees.

#### 270. Turkey Illusion

- **Definition:** Expecting continuous historical trends to persist indefinitely, failing to anticipate sudden, structural trend breaks.

- **Example:** Assuming a booming housing market will rise forever because it has climbed continuously for five consecutive years.

### 271. Actor-Observer Bias

- **Definition:** Attributing one's own actions to situational circumstances while attributing others' behaviours to their underlying personality traits.
- **Example:** Explaining your own late arrival as caused by bad traffic, but viewing a co-worker's late arrival as proof of laziness.

### 272. Defensive Attribution Hypothesis

- **Definition:** Attributing more blame to individuals involved in a serious mishap if they are perceived as dissimilar to oneself, protecting self-esteem.
- **Example:** Harshly blaming a driver in a crash for being reckless when you don't identify with them, but blaming road conditions if they share your background.

### 273. Egocentric Bias

- **Definition:** Recalling past events in a self-serving light or relying too heavily on one's own perspective when evaluating situations.
- **Example:** Remembering your contribution to a group project as having been 80% of the total work effort.

### 274. Experimenter's Bias (Expectation Bias)

- **Definition:** The tendency for researchers to evaluate data in ways that confirm their initial expectations while discounting conflicting findings.
- **Example:** A researcher re-checking anomalous data that contradicts their hypothesis while accepting confirming data without verification.

### 278. Objectivity Illusion

- **Definition:** Believing that one evaluates situations neutrally and objectively, while viewing conflicting perspectives as biased.
- **Example:** Believing your political analysis is based purely on logic and facts while viewing opposing arguments as purely emotional.

### 280. Outgroup Favouritism

- **Definition:** Expressing favourable attitudes and preferences toward social or cultural groups other than one's own, often seen in disadvantaged groups.
- **Example:** Preferring imported goods over locally produced items under the assumption that foreign products are inherently superior.

### 281. Pygmalion Effect

- **Definition:** The phenomenon where high expectations placed on individuals by leaders or teachers lead to improved performance.

- **Example:** Students performing significantly better academically after their teacher was falsely told the students were intellectual prodigies.

## 282. Selective Perception

- **Definition:** The tendency for personal expectations, beliefs, and interests to filter and shape how external stimuli are perceived.
- **Example:** A fan watching a sports game and noticing every foul committed by the opposing team while missing fouls by their own team.

## 285. Boundary Extension

- **Definition:** A memory distortion where people remember the background of an image as extending beyond the physical boundaries of what was shown.
- **Example:** Drawing a close-up photograph of a dog and incorrectly including details of the landscape outside the original photo frame.

## 286. Childhood Amnesia

- **Definition:** The inability of adults to retrieve explicit episodic memories from the early years of childhood (typically before age 3-4).
- **Example:** An adult having no direct personal memories of their third birthday party despite seeing photos of the event.

## 287. Consistency Bias

- **Definition:** Incorrectly remembering past attitudes and behaviours as being consistent with present beliefs and values.
- **Example:** Believing you have always supported a social policy, despite old journal entries showing you held opposing views years ago.

## 289. Cryptomnesia

- **Definition:** Mistaking a recalled memory for a original, novel thought because the subjective feeling of memory retrieval is missing.
- **Example:** Writing a song melody believing you composed it yourself, unaware you heard it on the radio years prior.

## 290. Cue-Dependent Forgetting (Context Effect)

- **Definition:** Difficulty retrieving memories when the environmental context during recall differs from the context present during encoding.
- **Example:** Failing to recall work-related software shortcuts while trying to remember them from home.

## 292. Duration Neglect

- **Definition:** Disregarding the total duration of an unpleasant or pleasant experience when evaluating its overall emotional impact.

- **Example:** Rating a 20-minute uncomfortable medical procedure as equally unpleasant as a 5-minute procedure of the same intensity.

### 293. Humour Effect

- **Definition:** Remembering humorous information far more easily than non-humorous information due to distinctiveness and emotional engagement.
- **Example:** Recalling safety guidelines presented in a comical cartoon video much better than guidelines read from a standard text manual.

### 294. Implicit Association

- **Definition:** The speed with which concepts are linked in memory based on subconscious strength of association.
- **Example:** Categorizing words faster when positive traits are paired with familiar concepts than when paired with unfamiliar concepts.

### 295. Lag Effect (Spacing Effect)

- **Definition:** Improved long-term memory retention when learning sessions are spaced out over time rather than crammed into a single session.
- **Example:** Retaining vocabulary words much better after studying 15 minutes daily for a week compared to studying two hours in one night.

### 296. Levelling and Sharpening

- **Definition:** Memory distortion over time where non-essential details are dropped (levelling) while specific chosen details are exaggerated (sharpening).
- **Example:** Retelling a story about a minor dog encounter over years until the dog's size is remembered as massive and the minor event becomes dramatic.

### 297. Memory Inhibition

- **Definition:** The phenomenon where retrieving certain items from memory makes it harder to retrieve related, non-practiced items from the same category.
- **Example:** Studying a list of fruits and rehearsing "apple" and "banana," making it harder to recall "kiwi" during a memory test later.

### 298. Misinformation Effect

- **Definition:** The impairment of memory accuracy caused by exposure to misleading post-event information.
- **Example:** Witnesses to a car accident reporting seeing broken glass after being asked "How fast were the cars going when they smashed into each other?", even though no glass was present.

### 299. Modality Effect

- **Definition:** The phenomenon where memory recall for the final items on a list is significantly higher when presented auditorily (speech) than visually (text).

- **Example:** Recalling the last three items of a spoken shopping list much more easily than if those same three items were read from a paper list.

### 300. Repetition Blindness

- **Definition:** An unexpected difficulty in detecting or remembering repeated instances of a visual stimulus presented in rapid sequence.
- **Example:** Failing to notice that the word "the" was printed twice in a sentence when reading rapidly ("She ate the the apple").

### 301. Next-in-Line Effect

- **Definition:** Reduced memory for the performance or words of the person speaking immediately before you when taking turns in a group setting.
- **Example:** Failing to remember what the colleague right before you said during round-robin introductions because you were focused on your own turn.

### 302. Part-List Cueing Effect

- **Definition:** The impairment of overall memory retrieval that occurs when presented with a subset of list items as cues to recall the remaining items.
- **Example:** Struggling to name all US states because you were given a partial list of 10 states as a starting hint.

### 303. Persistence

- **Definition:** The continual, unwanted recurrence of intrusive memories, often associated with traumatic or distressing experiences.
- **Example:** Re-experiencing vivid, involuntary memories of a severe car crash weeks after the physical injuries have healed.

### 304. Perky Effect

- **Definition:** A visual phenomenon where real external images interfere with or are misremembered as mentally imagined images (or vice versa).
- **Example:** Mistaking a faint, actual projection of a red tomato on a wall as something you are purely visualizing in your mind's eye.

### 305. Positivity Effect (Socioemotional Selectivity)

- **Definition:** The age-related tendency for older adults to selectively focus on and remember positive information over negative information.
- **Example:** Older adults recalling pleasant aspects of past travels while completely forgetting minor travel disruptions or illnesses.

### 306. Processing Difficulty Effect

- **Definition:** Information that requires greater cognitive effort or longer time to read and process is retained in memory more effectively.

- **Example:** Retaining facts from a textbook much better when presented in a slightly harder-to-read font that forces careful reading.

### 307. Reminiscence Bump

- **Definition:** The tendency for older adults to recall significantly more personal memories from adolescence and early adulthood (ages 10-30) than from other periods.
- **Example:** A 70-year-old having clear, detailed memories of high school and early job experiences compared to memories from middle age.

### 308. Social Cryptomnesia

- **Definition:** A societal tendency to forget the historical origins, key figures, and minority sacrifices that brought about major progressive social changes.
- **Example:** Accepting modern workplace safety laws as obvious common sense while forgetting the labor activists who fought and sacrificed to establish them.

### 309. Source Confusion

- **Definition:** Misattributing the origin of a memory, leading to distorted recollections where real events are mixed up with overheard stories, dreams, or media.
- **Example:** Believing a scene from a movie you watched actually happened during your own childhood.

### 310. Spacing Effect

- **Definition:** Long-term memory retention is significantly enhanced when study sessions are distributed over extended periods rather than condensed into a short timeframe.
- **Example:** Retaining foreign language vocabulary much better by studying 20 minutes daily for months rather than cramming for ten hours over one weekend.

### 311. Suffix Effect

- **Definition:** A reduction in the recency effect occurring when an irrelevant auditory stimulus (a "suffix") is appended to the end of a spoken list.
- **Example:** Decreased recall of the final word in a spoken list because the speaker concluded by saying "Done!" immediately afterward.

### 312. Suggestibility

- **Definition:** The incorporation of false information or leading suggestions from an interviewer into an individual's actual memory recall.
- **Example:** A witness altering their memory of a suspect's clothing after a detective asks, "Did you notice the blue jacket he was wearing?"

### 313. Telescoping Effect

- **Definition:** A temporal memory distortion where recent events are perceived as occurring further in the past (backward telescoping), and distant events are perceived as more recent (forward telescoping).
- **Example:** Believing a major news event from five years ago happened just last year.

### 314. Testing Effect

- **Definition:** The enhancement of long-term memory retrieval achieved by actively testing oneself on material rather than repeatedly reviewing or re-reading it.
- **Example:** Scoring higher on an exam by using flashcards to test active recall instead of re-reading class notes three times.

### 315. Bizarreness Effect

- **Definition:** The enhanced memory recall for unusual, absurd, or bizarre material relative to ordinary or expected material.
- **Example:** Remembering a vivid image of a piano flying on a parachute much better than an image of a piano sitting in a living room.

### 316. Frequency Illusion (Baader-Meinhof Phenomenon)

- **Definition:** The illusion that a recently noticed concept, word, or item suddenly appears with an impossibly high frequency in everyday life.
- **Example:** Learning about a rare car model for the first time and suddenly noticing that exact car model everywhere on your commute.

### 317. List-Length Effect

- **Definition:** As a list grows longer, the percentage of remembered items decreases, but the total absolute number of remembered items increases.
- **Example:** Remembering 80% of a 10-item list (8 items) versus remembering 50% of a 30-item list (15 items).

### 318. Negativity Bias (Memory & Judgment)

- **Definition:** The psychological tendency to recall, weigh, and be impacted by negative experiences or information far more strongly than neutral or positive ones.
- **Example:** Ruminating all evening over one critical comment on a performance review despite receiving nine glowing compliments.

### 319. Continued Influence Effect

- **Definition:** The persistent reliance on misinformation in reasoning and decision-making even after explicit, verified corrections have been provided.
- **Example:** Continuing to suspect a suspect in a crime investigation long after forensic evidence completely exonerated them.

### 320. Stereotype Bias

- **Definition:** Memory retrieval distortion where recollections are unconsciously altered to fit prevailing social, racial, or gender stereotypes.
- **Example:** Incorrectly remembering a female doctor as a nurse when recalling a past hospital visit.

### 321. Choice-Supportive Bias

- **Definition:** Retroactively attributing positive attributes to an option one chose and negative attributes to rejected options to justify the decision.
- **Example:** Remembering your purchased car as reliable and smooth while recalling the alternative model you test-drove as clunky.

### 322. Declinism

- **Definition:** The cognitive predisposition to view the past with nostalgia (rosy retrospection) while viewing the future as undergoing inevitable decline.
- **Example:** Insisting that music, society, and work ethic were vastly superior decades ago compared to the modern era.

### 323. Euphoric Recall

- **Definition:** Nostalgic recollection of past events (often substance use or past relationships) where positive emotions are exaggerated and negative consequences forgotten.
- **Example:** Remembering past party lifestyles with intense fondness while completely suppressing memories of the resulting hangovers and financial strain.

### 324. Recency Illusion

- **Definition:** The false belief that a word, phrase, or social phenomenon one recently noticed is a modern innovation when it has actually existed for a long time.
- **Example:** Assuming slang like "cool" or specific grammatical constructions are modern youth inventions when they date back over a century.

### 325. Cross-Race Effect

- **Definition:** The difficulty individuals face in accurately recognizing and distinguishing faces of people from racial groups different from their own.
- **Example:** Struggling to identify distinct individuals in a line-up of people belonging to an unfamiliar ethnic background.

### 326. Gender Differences in Eyewitness Memory

- **Definition:** The empirical tendency for eyewitnesses to recall more details about individuals who share their same gender.
- **Example:** Female eyewitnesses accurately recalling more clothing and physical details about female suspects than male suspects.

### 327. Placement Bias (Better/Worse-Than-Average Memory)

- **Definition:** Distorting memories to view oneself as superior to peers on tasks rated as easy, but inferior on tasks rated as exceptionally difficult.
- **Example:** Remembering yourself as a far better driver than average, but an unusually terrible artist compared to others.

### 328. Self-Relevance Effect

- **Definition:** Memory is vastly superior for information that is directly linked or processed in relation to oneself compared to neutral information.
- **Example:** Remembering a list of personality adjectives far better if asked "Does this word describe you?" during learning.

### 329. Moral Credential Effect

- **Definition:** The psychological license people give themselves to engage in biased or unethical behaviour after establishing a history of good actions.
- **Example:** Someone acting dismissively or rudely toward others after recently making a major charitable contribution.

### 330. Backfire Effect

- **Definition:** A phenomenon where presenting facts that contradict a deeply held belief causes an individual to double down and strengthen that belief.
- **Example:** Becoming even more convinced of a conspiracy theory after being presented with peer-reviewed data disproving it.

### 331. End-of-History Illusion

- **Definition:** The tendency for people of all ages to recognize how much they have changed in the past, while believing they will change very little in the future.
- **Example:** A 20-year-old realizing how much their values shifted over 10 years, but assuming their current values will remain fixed forever.

### 332. Omission Bias

- **Definition:** Judging harmful actions (commissions) as morally worse or more culpable than equally harmful inactions (omissions).
- **Example:** Viewing actively giving someone bad advice as worse than withholding helpful advice that would prevent the exact same harm.

### 333. Courtesy Bias

- **Definition:** Giving a polite or socially acceptable opinion rather than one's true, honest feelings to avoid conflict or offending others.
- **Example:** Telling a cook that their meal tasted wonderful when you actually found it underseasoned.

### 334. Illusion of Learning

- **Definition:** Mistaking comprehension while reading or listening to a topic for actual mastery and retention of that material.
- **Example:** Feeling confident after reading a textbook chapter once, but failing to recall the key concepts during an unassisted quiz.

### 335. Moral Luck

- **Definition:** Assigning different degrees of moral blame or praise to an action based entirely on the outcome, which was governed by chance.
- **Example:** Judging a drunk driver who hits a tree less harshly than a drunk driver who hits a pedestrian, despite identical reckless choices.

### 336. Misinterpreted-Effort Hypothesis

- **Definition:** Incorrectly interpreting the cognitive effort required to learn something as a signal of poor learning or low ability.
- **Example:** Assuming you are bad at a subject because working through practice problems feels difficult and exhausting.

### 337. Social Desirability Bias

- **Definition:** The tendency of survey respondents to over-report virtuous traits and under-report undesirable behaviours to look good to others.
- **Example:** Over-reporting daily exercise habits and under-reporting junk food intake on health questionnaires.

### 338. Stereotyping

- **Definition:** Expecting an individual to possess specific traits or behaviours based solely on their membership in a particular group without individual verification.
- **Example:** Expecting a computer science major to be introverted and obsessed with video games before meeting them.

### 339. Women-Are-Wonderful Effect

- **Definition:** A socio-cultural tendency to associate significantly more positive qualities and attributes with women than with men overall.
- **Example:** Implicitly associating terms like "nurturing," "gentle," and "honest" more readily with female figures in social research.

### 340. Anthropocentric Thinking

- **Definition:** Using human traits, experiences, and biological analogies as the baseline for explaining non-human biological phenomena.
- **Example:** Explaining animal social structures entirely through the lens of human family dynamics and cultural values.

### 341. Anthropomorphism

- **Definition:** Attributing human emotions, intentions, or personality characteristics to animals, inanimate objects, or natural processes.
- **Example:** Believing your pet dog is acting "guilty" or "vengeful" after chewing a shoe while you were away.

### 342. Ben Franklin Effect

- **Definition:** The phenomenon where doing a favour for someone increases your liking for that person because your brain rationalizes the helpful act.
- **Example:** Lending a book to an acquaintance and subsequently viewing them more warmly because you helped them out.

### 343. Bias Blind Spot

- **Definition:** Recognizing the presence and impact of cognitive biases in other people while failing to see the exact same biases in oneself.
- **Example:** Identifying confirmation bias in an opponent's argument while insisting your own political opinions are purely objective.

### 344. Illusion of Asymmetric Insight

- **Definition:** Believing that your personal understanding of your peers is far deeper and more accurate than their understanding of you.
- **Example:** Feeling that you can read your friends "like an open book" while believing your own inner world remains mysterious to them.

### 345. Illusory Superiority (Better-Than-Average Effect)

- **Definition:** Overestimating one's desirable qualities, abilities, and virtues relative to the average person in a peer group.
- **Example:** A survey finding that 90% of drivers rate their driving skills as "above average."

### 346. Impostor Syndrome

- **Definition:** A persistent psychological pattern where capable individuals doubt their achievements and fear being exposed as a "fraud."
- **Example:** A successful executive believing their promotion was due to luck rather than their years of hard work and talent.

### 347. Trait Ascription Bias

- **Definition:** Viewing one's own personality, mood, and behaviour as flexible and context-dependent, while viewing others as rigid and predictable.
- **Example:** Explaining your quiet behaviour at a party as "just feeling tired," while viewing a quiet peer as an inherently shy person.

### 348. Zero-Sum Bias

- **Definition:** Incorrectly perceiving a situation as a strict zero-sum interaction, where any gain achieved by one party must come at a direct loss to another.
- **Example:** Viewing a colleague's professional promotion as a personal setback, even when your own career trajectory is entirely unaffected.
